

Zo-physics Proposal Reading Tips:

The first thing to note is, when you get to the written ‘walk through’ of my number line explanation, if it comes across sounding wonky that’s likely because it is still an aspect I’m working on trying to clarify better in text; it’s challenge enough to walk through it orally without some Q/A along the way, and obviously the reader can’t pause the writer for a clarification. This is a new space for me to write about, all these numbers, and that’s an aspect of my writing I’m working on crafting better, so, . . . pardon the w.i.p., ..? When explaining it face-to-face, so far, most everyone has picked right up on my description, so it’s not a difficult ‘walk – through.’

For the most part, the points are all circular enough that, barring ‘starting at the beginning’, it pretty doesn’t seem to matter in what order one reads them in; the MS program doesn’t seem to have a setting for arranging them in my order, it alphabetizes the lists, and the other options don’t work out any better, so making an ‘index’ of a sort is my end-around.

Virtually each paper is sub-500 w.c., so bouncing around is easy.

An official order should begin:

- 1.) Plancktonian Protophysics
- 2.) A.I.-P.P.
- 3.) My Cosmology Paper

After that the rest are short; it really doesn’t matter, I’d suggest what seems the most curious, individual interest is probably the best guide, one is more likely to fill in the puzzle according to her/his own mind-map methods and assemble the pieces clearer for individuals’ natural assimilation patterns.

Thank you for your time and neurological investment!
